*Table of Contents*

*Page*

1	Introduction .....	10
2	Power Systems General Information.....	12
2.1	Requirements .....	12
2.1.1	Device Load Requirements .....	12
2.1.2	Power System Requirements.....	15
2.1.3	Regulatory Requirements.....	18
3	Power System Architectures .....	24
3.1	Introduction .....	24
3.2	Power System Architecture Definitions .....	24
3.2.1	Centralized Power Architecture.....	24
3.2.2	Multi-location Centralized Power Architecture .....	24
3.2.3	Distributed Power Architecture.....	24
3.3	Centralized Power Architecture .....	26
3.4	Multi-location Centralized Power Architecture.....	27
3.5	Distributed Power Architectures .....	28
3.5.1	Intermediate Bus Architecture .....	30
3.5.2	Centralized Controller Architecture .....	31
4	Distributed Power Architectures .....	32
4.1	Characteristics of Distributed Power Architectures .....	32
4.2	Viability of Distributed Power Architectures.....	32
4.3	Advantages of Distributed Power Architectures .....	33
4.3.1	Better Electrical Performance .....	33
4.3.2	Allows use of Standard BMPS .....	33
4.3.3	Automated Assembly Process .....	33
4.3.4	Better Back panel Utilization .....	33
4.3.5	Better Connector Utilization .....	33
4.3.6	Distributed Heat Load.....	33
4.3.7	Ease of Battery Backup.....	33
4.3.8	Ease of Regulatory Qualifications .....	34
4.3.9	Enhanced Reliability.....	34
4.3.10	Enhanced Failure Isolation Capability.....	34
4.3.11	Fault Tolerance .....	34
4.3.12	Flexibility for Upgrades and Features .....	34
4.3.13	Live Insertion / Hot Plugging .....	34
4.3.14	Low Cost Entry Systems .....	35
4.3.15	Lower Total Cost of Ownership.....	35
4.3.16	Reduced Time-to-Market.....	35
4.3.17	Simpler DC Distribution .....	35
4.3.18	Circuit Design Flexibility .....	35
4.4	Electrical Design .....	35
4.4.1	Converter Power Sizing.....	35
4.4.2	Load Partitioning .....	38
4.4.3	Bus Voltage Selection .....	38
4.4.4	DC Distribution .....	39
4.4.5	Fault Protection .....	47
4.4.6	Input Considerations .....	49
4.4.7	Stability Considerations.....	50
4.4.8	Inrush Current Limitation.....	52
4.4.9	Controls .....	52
4.5	Electromagnetic Compatibility (EMC).....	57
4.5.1	Introduction .....	57
4.5.2	EMC Basics .....	57
4.5.3	Standards and Requirements .....	58

4.5.4	Compliance Strategies .....	60
4.5.5	BMPS Performance.....	61
4.5.6	System Design Guidelines .....	61
4.6	Thermal Design .....	62
4.6.1	Introduction .....	62
4.6.2	Thermal Definitions .....	62
4.6.3	Conduction Cooling.....	64
4.6.4	Free Convection Cooling.....	69
4.6.5	Forced Convection Cooling.....	71
4.6.6	Combined Cooling Techniques .....	73
4.6.7	Design Trade-offs .....	75
4.6.8	Cooling considerations for open-frame BMPS.....	78
4.6.9	Output Power Derating.....	81
4.7	Manufacturing and Packaging.....	82
4.7.1	Introduction .....	82
4.7.2	BMPS Considerations .....	82
4.7.3	System Manufacturing Considerations .....	83
4.7.4	System and Equipment Building Practice .....	85
4.8	Reliability .....	86
4.8.1	Introduction .....	86
4.8.2	Definitions and Concepts .....	86
4.8.3	Reliability Prediction and Measurement Techniques .....	89
4.8.4	Failure Rate, MTBF, and Lifetime .....	92
4.8.5	Design Practices for Maximum Reliability.....	94
4.8.6	Procurement Practices for Maximum Reliability.....	95
4.8.7	Tin whiskers .....	95
4.8.8	Examples of Power System Reliability Calculations.....	96
4.9	Cost Analysis .....	97
4.9.1	Introduction .....	97
4.9.2	Reliability Costs .....	98
4.9.3	Reliability and total system cost.....	99
4.9.4	Development Costs .....	99
4.9.5	Total Cost Analysis.....	102
5	Board Mounted Power Supplies.....	104
5.1	The User - Supplier Interface .....	104
5.2	General Considerations .....	104
5.2.1	Datasheet and Technical Specifications .....	104
5.3	Power Converter Topologies.....	109
5.3.1	Introduction .....	110
5.3.2	Classification of Topologies .....	110
5.3.3	Description of Common PWM Topologies .....	111
5.3.4	Quasi-Resonant Switching Topology.....	115
5.3.5	Synchronous Rectification.....	116
5.3.6	Multiphase Conversion.....	117
5.4	Standard Versus Custom Power Supplies .....	118
5.4.1	Introduction .....	118
5.4.2	Product Definition .....	119
5.4.3	Packaging Interfaces.....	119
5.4.4	Component Dependencies.....	119
5.4.5	Manufacturing Start-up.....	119
5.4.6	Qualification .....	120
5.4.7	System Integration .....	120
5.4.8	Supply Chain .....	120
5.4.9	Flexibility .....	120
5.4.10	Skills Allocation .....	120
5.4.11	The Standard Advantage .....	121
5.4.12	Cost Analysis of Custom Solutions and Standard BMPS .....	121
5.4.13	Smart power IC and discrete solutions .....	122
5.5	Requirements .....	124
5.5.1	User – Supplier Accepted Requirements.....	124
5.5.2	End-user Preferred Solutions.....	124
5.5.3	Restriction of Hazardous Substances and Lead-free Soldering.....	130
6	Digital Power .....	132
6.1	Digital Control and Management.....	132

6.1.1	Power Supply Control.....	133
6.1.2	Power System management .....	135
7	Design for Environment and Energy Savings.....	138
7.1	Energy Efficiency Regulations and Government Policies .....	138
7.1.1	General .....	138
7.1.2	From voluntary to mandatory .....	139
7.1.3	Status and current development .....	139
7.2	Energy efficiency in Information & Communication Technology equipment .....	140
7.3	Emerging Power Systems .....	141
7.4	BMPS .....	143
8	BMPS Organizations and Associations .....	145
8.1	DOSA Overview .....	145
8.2	POLA Overview .....	145
9	Links .....	146
9.1	Organizations .....	146
9.2	BMPS Manufacturers .....	146
10	References .....	147
10.1	General .....	147
10.2	Power System Architecture .....	147
10.3	Power Converter Technology .....	147
10.4	High Frequency DC/DC Converters .....	148
10.5	Discrete Reference Designs.....	148
10.6	Thermal Management .....	148
10.7	Reliability .....	148
10.8	Digital Power .....	148

<i>Table of figures</i>	<i>Page</i>
Figure 2-1 Circuit operating voltage limits.....	12
Figure 2-2 Dynamic response.....	13
Figure 2-3 Voltage sequencing.....	13
Figure 2-4 Simultaneous sequencing.....	14
Figure 2-5 Typical ripple and noise.....	14
Figure 2-6 Typical isolation scenario.....	16
Figure 2-7 Impacts of regulatory requirements.....	20
Figure 3-1 Centralized and multi-location centralized power architecture.....	25
Figure 3-2 Example of distributed power architecture.....	25
Figure 3-3 Centralized telecom system.....	27
Figure 3-4 Personal Computer power system.....	27
Figure 3-5 Distributed power architecture in a personal computer.....	28
Figure 3-6 Power per shelf DPA.....	29
Figure 3-7 Power per function DPA.....	29
Figure 3-8 Power per board distributed power architecture.....	30
Figure 3-9 Examples of IBC designs.....	31
Figure 4-1 Implementation of "power per board" distributed power architecture.....	32
Figure 4-2 Converter current margin trade-offs.....	37
Figure 4-3 Bus voltage selection criteria.....	39
Figure 4-4 Voltage distribution guidelines.....	40
Figure 4-5 Dynamic requirements example.....	42
Figure 4-6 Distributed model of DC distribution network.....	42
Figure 4-7 Localized decoupling.....	44
Figure 4-8 Typical board layout.....	46
Figure 4-9 Droop regulation for increased dynamic margin.....	47
Figure 4-10 Converter output noise filtering techniques.....	47
Figure 4-11 Input fusing.....	49
Figure 4-12 Input protection circuits.....	50
Figure 4-13 Negative resistance characteristic of a 100 W BMPS.....	51
Figure 4-14 Input voltage oscillations.....	51
Figure 4-15 Typical BMPS input filter configuration.....	51
Figure 4-16 Input voltage shutdown operation.....	53
Figure 4-17 Decentralized input voltage shutdown.....	54
Figure 4-18 Centralized input voltage shutdown.....	54
Figure 4-19 Direct paralleling of converters.....	56
Figure 4-20 Conducted noise.....	58
Figure 4-21 EN50081-1 and FCC class B domestic requirements.....	59
Figure 4-22 EN50081-2 and FCC class A industrial requirements.....	60
Figure 4-23 Typical EMI filter.....	62
Figure 4-24 Electrical & thermal resistance.....	64
Figure 4-25 Calculation of thermal resistance.....	65
Figure 4-26 Example of thermal conduction.....	66
Figure 4-27 Thermal resistance diagram.....	66
Figure 4-28 Typical component type BMPS.....	67
Figure 4-29 Conduction cooled BMPS in convection cooled equipment.....	68
Figure 4-30 Thermal model of conduction cooled BMPS.....	69
Figure 4-31 Example of free convection cooled BMPS.....	70
Figure 4-32 Thermal resistance vs. air velocity.....	71
Figure 4-33 Example of forced convection cooled system.....	72
Figure 4-34 Detail of BMPS and heat sink.....	73
Figure 4-35 Thermal model of BMPS with combined cooling techniques.....	74
Figure 4-36 Thermal resistance for BMPS with combined cooling techniques.....	74
Figure 4-37 Average power per board in typical telecom equipment.....	77
Figure 4-38 Basic closed-loop wind tunnel.....	79
Figure 4-39 Typical test setup and airflow sensor location.....	80
Figure 4-40 Component junction temperature as a function of output current.....	81

Figure 4-41 Example of junction and case temperatures for a standard SO8 MOSFET .....	81
Figure 4-42 Example of derating chart for an open frame module .....	82
Figure 4-43 Examples of different types of BMPS packaging.....	83
Figure 4-44 Component and building height considerations.....	85
Figure 4-45 Reliability bathtub curve .....	86
Figure 4-46 Plot of reliability function $R(t)$ .....	87
Figure 4-47 Conversion factors between failure rate units .....	88
Figure 4-48 $R(t)$ as a function of operating time .....	89
Figure 4-49 Effect of ambient temperature on BMPS failure rate .....	94
Figure 4-50 Comparison of power architectures.....	97
Figure 5-1 Interrelationship between BMPS selection criteria .....	105
Figure 5-2 Superimposition of slightly different frequencies leads to beat frequencies .....	107
Figure 5-3 Classification of converter topologies .....	110
Figure 5-4 Non-isolated buck converter.....	111
Figure 5-5 Non-isolated buck converter waveforms .....	112
Figure 5-6 Flyback converter .....	113
Figure 5-7 Forward converter .....	113
Figure 5-8 Push-pull converter.....	114
Figure 5-9 Half-bridge converter .....	114
Figure 5-10 Full bridge converter.....	114
Figure 5-11 Basic diagram of quasi-resonant, zero-current switching DC-DC converter .....	115
Figure 5-12 Benefit of synchronous rectification .....	117
Figure 5-13 Examples of synchronous rectification .....	117
Figure 5-14 Multiphase conversion circuit .....	118
Figure 5-15 The discrete component alternative .....	123
Figure 6-1 Example of digitally controlled BMPS.....	132
Figure 6-2 Block diagrams of analog and digital control systems.....	133
Figure 6-3 Higher BMPS efficiency by optimizing dead time .....	134
Figure 6-4 Non-linear, or adaptive, control optimize stability and dynamic response.....	134
Figure 6-5 Digital power management with BMPS, controller and communication bus.....	135
Figure 6-6 Sequencing order for start-up and shut-down of multiple BMPS.....	136
Figure 6-7 Digital power management for voltage margining of BMPS (corner testing).....	136
Figure 7-1 AC UPS vs. Future DC power system in data centers .....	142
Figure 7-2 Proposed hvDC power system for telecom CO .....	142
Figure 7-3 Drivers for hvDC in data centers and ICT equipment .....	143
Figure 7-4 BMPS efficiency evolution .....	144
